Our Vision

To be known as the most reliable and trusted emergency lighting company in the world.

Our Mission

To make emergency lighting easy by designing world-class products that are supported with unrivalled expertise and customer service.

We make Emergency Lighting easy.

Our mission to make emergency lighting easy continues to drive us to develop the best outcome for all stakeholders. With our dedicated research and development teams, Clevertronics is positioned to continue its leadership position in emergency lighting solutions.

Clevertronics is an Australian emergency lighting specialist that operates across Australia, New Zealand and the United Kingdom.

Whether you're a specifier, facility manager, end user, or electrical contractor, our goal is to ensure that we understand your needs and assist you in delivering the outcomes you're after.

Clevertronics has built a global reputation for our innovation and leadership in emergency lighting over the past twenty years. Our recent release of the latest Zoneworks XT HIVE system is a major game changer, simplifying every step of the emergency lighting process and, most importantly, reducing the total cost of compliance.

However, what I am most proud of is the culture of customer care that exists throughout the entire company. Our customers remain our main priority, and our goal is to deliver you the highest level of product quality, service and support.

We look forward to sharing our continued success with you.

Tony Todaro

Tony Todaro
Managing Director and Owner

We are the home of Emergency Lighting

Clevertronics is an Australian emergency lighting specialist that operates across Australia, New Zealand and the United Kingdom. Our head office located in Melbourne features state-of-the-art product development and manufacturing to support the continuing growth of the business.

We Embrace and Lead Innovation

Innovation features in many parts of our business, including luminaire design and functionality, world-class monitoring systems, and also how we support customers to learn, source, install and manage emergency lighting. One of the key innovations that revolutionised the emergency lighting market was the release of our L10 Lithium Nanophosphate range. Traditional emergency lighting maintenance costs have been expensive to manage due to poor battery life, resulting in non-compliance.

However, the introduction of the L10 Nanophosphate range increased luminaire lifetimes from four years to twelve years, resulting in over 80% maintenance savings compared to the available alternatives and a massive improvement in building compliance.

Our Systems

Managing the compliance of emergency lighting is critical and to do this effectively Clevertronics developed a world-leading automatic monitoring and testing system in Zoneworks XT HIVE.

The Zoneworks platform is installed and operational across 2500 sites around Australia, New Zealand and the UK. All Zoneworks systems are backed by a complimentary Advantage Lifetime Support program designed to help the building owner and maintenance contractor manage ongoing emergency lighting and associated costs.

Our Unique Capabilities

We design, prototype and test all our luminaires and systems from our new state-of-the-art head office in Melbourne, Australia. Our research and product development area consists of photometric laboratories, thermal testing chambers and long-term elevated temperature test rooms which assist us in releasing product to market in a fast and effective manner. We have manufacturing capabilities in Melbourne and Shanghai, catering to high volume and specialised requirements.

Our Expertise

Our extensive expertise in understanding emergency lighting standards and application requirements has resulted in 1000's of specialised luminaires being designed and manufactured for installation in projects like tunnels, heritage buildings, places of interest, harsh environments, stadia, rail infrastructure and many other applications. If you have a challenging application, we will be excited to create a solution for you.

Our Projects

Clevertronics has supported our customers in the process of installing and upgrading emergency and exit lighting in thousands of small, medium and large sized facilities across Australia, New Zealand and the UK. All projects are given the support they require no matter what size. Customer satisfaction is of utmost importance to the Clevertronics team.

We are proud to be installed in many global landmark facilities including the Sydney Opera House, Melbourne Cricket Ground, Optus Stadium and Westminster Abbey as well as major hospitals, shopping centres, universities, correctional facilities and high-rise developments.

When you are installing or upgrading emergency lighting, you want the process to be easy, and Clevertronics delivers on this every time.

Our Emergency Lighting Solutions

Clevertronics have a wide range of exit, emergency, circulars, bulkheads and linears to satisfy various applications and industries. Whether you require architectural, weatherproof, low temperature, or a custom luminaire for a specific requirement, we are here to support you. All our luminaires are tested and comply with BS EN 60598-2-22 standards.

The Clevertronics Project Advantage

Many projects require custom designed product, finishes or specific performance requirements. Our team of product and system engineers lead the emergency lighting world in many areas and are ready to apply that expertise to your project.

Experts in Engineering a Solution

Clevertronics has in-house thermal and photometric testing facilities which enables us to test and evaluate custom products and retro-fit conversions prior to any formal certification. Clevertronics can manage the official testing and approval process for third party fit-outs if required.

Comprehensive Range

Our full product offering is extensive. We have two dedicated ranges, CLP and L10 spanning all emergency, exit and linear luminaires. All ranges are available with testing options including Clevertest Plus, Zoneworks XT HIVE, and DALI. This is supplemented by the ability to build custom project specific fittings and conversion of 3rd party fittings where required.

We have offices located in Australia, New Zealand and the UK

Our office in London has dedicated customer service and technical resources ready to support you on your next emergency lighting project or enquiry.

Clevertronics Head Office in Melbourne, Australia.

Key Product Selection Criteria

Selecting the Right Lithium Powered Product

There are many types of batteries used in emergency lighting and it is important to understand the strengths and weaknesses of each battery chemistry to ensure you can get maximum value from your product.

Older battery technology such as Sealed Lead Acid, Nickel Metal Hydride and Nickel Cadmium provide inferior performance and carry significant environmental impacts compared to Lithium Iron Phosphate (LiFePO₄) batteries.

- Australia's No1 selling emergency lighting range
- Over 50% maintenance savings vs NiCd
- Standard Clevertest Plus

The CLP range is the proven project performer that combines Lithium Iron Phosphate battery technology with premium electronics and LED technology.

Available with Zoneworks® and DALI® testing options.

- Lowest total ownership cost
- 50% longer battery life vs any other lithium product
- 60% maintenance savings vs any other lithium product
- Over 80% maintenance savings vs NiCd
- Standard Clevertest Plus

Nothing else competes with L10 Nanophosphate®, due to the structure of the Nanophosphate chemistry enabling higher power, increased abuse tolerance and longer life compared to other Lithium Iron Phosphate offerings.

Available with Zoneworks® and DALI® testing options.

L10 Lithium Nanophosphate®

The first and only Nanophosphate® powered product on the market

- Lowest total ownership cost
- 50% longer battery life vs any other lithium product
- 60% maintenance savings vs any other lithium product
- Standard Self Test

The L10 advantage

Clevertronics were global pioneers when they launched the L10 Nanophosphate range of products in 2012 incorporating Lithium Nanophosphate® battery technology which was the world's first lithium powered product on the market. The L10 range has proven to be a significant influence on the market due to the incredible maintenance savings that have been realised. The range is comprehensive and covers Exit and Emergency luminaires as well as a full range of Linears so you can ensure the facility can take full advantage of the savings available.

Since launch, over one million L10 Nanophosphate fittings have been installed into 100's of sites across the UK, Australia and NZ including, Melbourne Cricket Ground, Perth Children's Hospital, Barangaroo Reserve, Legacy Way Tunnel, Etihad Stadium, NHS and City of Oxford College, and on-site real world results are exceeding bench-test performance predictions by a significant margin. Clevertronics Zoneworks XT HIVE monitoring system provides unprecedented visibility into on-site product and maintenance performance, which assists facility managers in achieving compliance and helps Clevertronics in our drive for further innovation.

Testing and Development

Together with over ten years of bench-testing data at elevated temperatures and on-site "torture testing" with specific trial-site partners, Clevertronics has cemented its position as the world leader in lithium powered emergency lighting with its L10 range powered by Nanophosphate technology.

To understand the challenges of incorporating an LFP battery into an Emergency light and why long term testing and making it work in harmony with the total product is vital to ensure long term reliability, Michael Duce – National Systems and Engineering Manager from Clevertronics, provided some insight. "When we were embarking on this project, we knew the reliability of the product was centred around the impact heat has on the components inside emergency luminaires, so we put significant resources into redesigning products to place batteries away from heat sources. In the case of linear luminaires, we developed a thermally isolated section or POD at the end of the linear to house the LFP battery, and the emergency LED light source."

Testing was rigorous and Michael and his Australian-based team spent over two years testing the product before it was released on the market in 2012. Michael adds further details about managing the project.

"The second challenge was to ensure we could incorporate the battery into the various range of fittings. Our customers needed a complete range of Emergency, Exits and Linear fittings for their projects and to realise the 80% plus maintenance savings from the L10 range we needed to deliver the entire range as a package. This was challenging from an engineering perspective due to the massive scale of the development task given the large number of different products in our range. It meant that we had to structure the development team to work on several product families concurrently and work very closely with the Production Team to ensure a smooth transition to full-scale production. To see the results now provides great satisfaction especially being the global innovators."

"When we were embarking on this project, we knew the reliability of the product was centred around the impact heat has on the components inside emergency luminaires, so we put significant resources into redesigning products to place batteries away from heat sources."

So what is Lithium Nanophosphate?

Nanophosphate® is a registered trademark for a Lithium Iron Phosphate battery technology that maximises the performance of the standard technology. The three main areas where Lithium Nanophosphate has distinct advantages over other Lithium Iron Phosphate batteries are listed below.

Power – Nanophosphate is a positive electrode material of remarkable rate capability, critical to high power systems. High power products are able to pulse at discharge rates as high as 100°C and deliver superior power by weight or volume in a cost-effective solution. With their low impedance and thermally conductive design, high power cells can be continuously discharged at a 35°C rate, a marked improvement over other rechargeable battery alternatives, and have consistent power over a wide state of charge (SOC) range.

Safety – Safety begins with chemistry and Nanophosphate is stable chemically, which provides the foundation for safe systems while meeting the most demanding customer requirements. Multiple layers of protection are employed at the chemistry, cell and system level to achieve an energy storage solution with superior safety and abuse tolerance compared to metal oxide lithium-ion chemistries.

Life – Nanophosphate technology delivers exceptional calendar and cycle life. At low rates our cells can deliver thousands of cycles at 100% depth of discharge (DOD), a feat unmatched by most commercial lithium ion cells. Even when cycled at 10°C discharge rates, cells deliver in excess of 1,000 full DOD cycles. Not only does the technology retain its energy, it also retains its power capability. Not all lithium-ion technologies behave the same. The nanoscale structure of the Nanophosphate chemistry, for example, enables battery systems with higher power, increased abuse tolerance, longer life and the greater ability to maintain consistent power over a wide range of state-of-charge (SOC) as compared with competing lithium-ion and other chemistries. Understanding the fundamental chemical differences between Nanophosphate and other technologies is necessary to develop a complete and accurate assessment of the optimal advanced battery system that will deliver the best performance for a given application.

L10 Nanophosphate Lithium Battery

The Lithium Iron Phosphate battery technology has been available for over 15 years. However, significant technological breakthroughs in the early-2000s by leading manufacturers of these cells has provided the advanced properties which now sees this as the battery technology of choice for such applications as electric cars, emergency lighting, power drills, and computers. The L10 Nanophosphate range utilises a Lithium Iron Phosphate battery that has significant improvements due to the Nanophosphate advantage.

At Clevertronics, we also believe that when comparing different emergency lighting products, it is important to ensure the technology is comparable as not all emergency

lighting powered with Lithium Iron Phosphate batteries will perform at the same level. It is, therefore, critical to ask to see the performance from actual site results to give you the complete story.

There's a real difference when the results are in!

What emergency lighting compliance system is right for me?

Clevertest Plus (CTP) system is suitable for the simplest and smallest of sites, right through to medium and large installations where compliance and low ownership costs are important. The CTP system replaces the manual testing of emergency lighting, with self test fittings and includes the CleverSparky Electronic log book app for your phone and PC.

Zoneworks XT HIVE is the most advanced emergency lighting system in the world. Utilising Dynamic self-managed meshing allows the simplest RF backbone set up for any site.

Every Zoneworks XT HIVE system is backed by the Clevertronics Advantage Lifetime Support program which is designed to help the building owner and maintenance contractor manage the health of the system at no additional cost.

What emergency lighting compliance system is right for me?

Marvel Stadium has 2756 fittings that are monitored by Zoneworks XT

St Vincent's Care Service in Towoomba has 73 fittings utilising the CTP System

The lowest cost emergency lighting system on the market

The Clevertest Plus (CTP) system is designed to provide building owners and electrical contractors with a cost-effective and thorough means of managing emergency lighting.

“Throw away that old logbook”

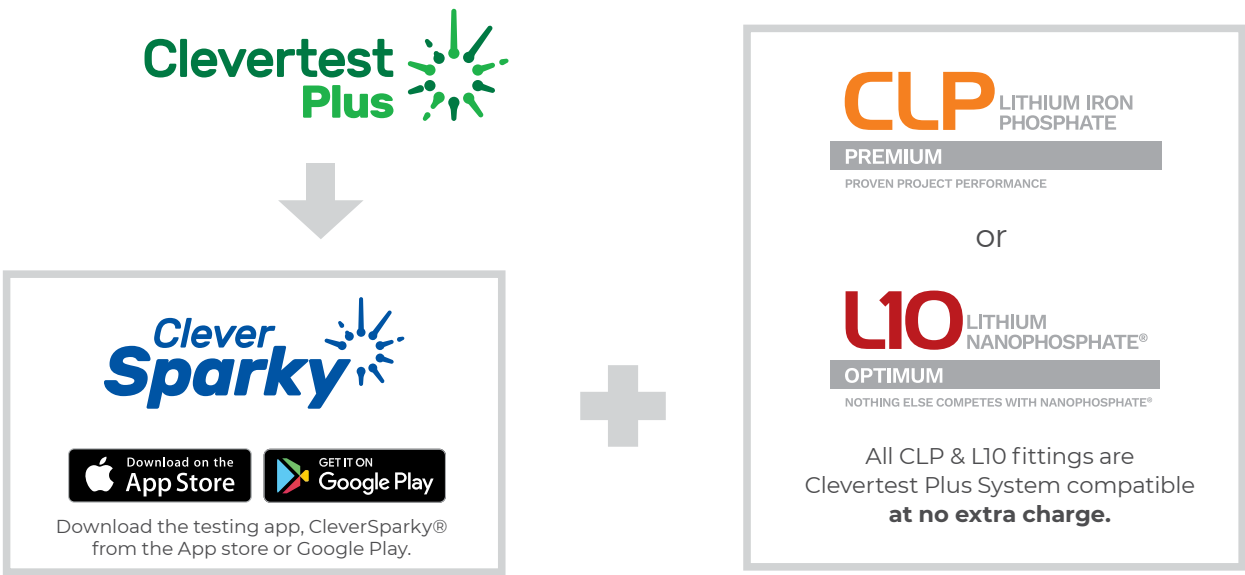

The Clevertest Plus System will provide more accurate testing by ensuring no fittings are missed during a logbook test.

Despite our connected world, the vast majority of new installs continue with manually tested fittings and paper-based compliance reports which are time-consuming, inefficient, often inaccurate and difficult to access. To overcome these issues, the Clevertest Plus System brings automatic testing, site management and compliance reporting to the mobile world; your accurate site information will now be available where you want it and when you want it.

Features and Benefits of the Clevertest Plus System

- Fittings automatically perform a 1-minute function test every month, and a 180-minute test annually
- Does not require a test switch at the switchboard
- No need for a data cable, wireless connection or centralised PC
- Complies with BS EN 62034 and BS 5266-8 automatic testing requirements
- Compliance reporting available instantly on phone or web portal
- No need for any paper-based log book
- Provides an accurate diagnosis of lamp, battery or control gear for each faulty fitting
- Manage multiple sites under one account.

What do I need for the Clevertest Plus System?

The Clevertest Plus System (CTP) allows you to manage Emergency Lighting compliance with ease, saving you time and money.

Step 1

Activate the CTP self-test function on each luminaire and put fitting into test.

At the fitting
or
At the breaker

Step 2

Use the CleverSparky mobile app or the CleverSparky web interface to build your site database.

cleversparky.com

Step 3

Use Quick Collect to rapidly gather the test results or scan a fitting to see detailed test or fault information.

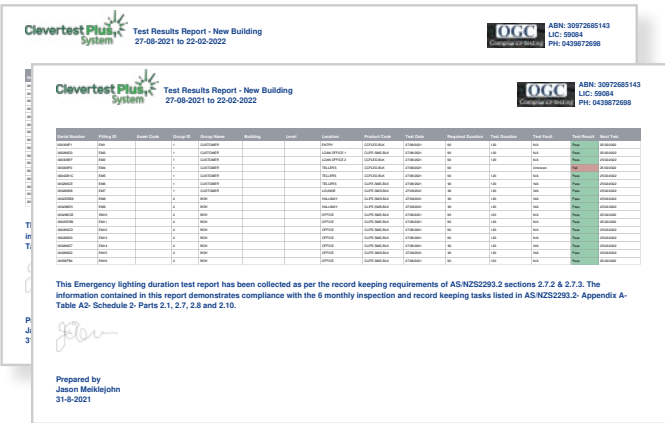

Quick collect
or
LED scan

Step 4

Instantly produce detailed and professional compliance reports, customised with a business logo and digital signature.

Download from the App Store or Google Play

Download the testing app, CleverSparky® from the App store or Google Play.

Zoneworks is the world’s most advanced emergency lighting system with over 1,500 sites installed globally.

The introduction of Zoneworks XT HIVE has redefined the way emergency lighting is designed, installed and managed, making it the most advanced system on the market.

Zoneworks XT HIVE reduces the backbone hardware requirements to a single RF controller and adds dynamic self-managed meshing technology to make your emergency lighting simpler, faster and easier than ever before.

- If you are designing an emergency lighting system, **it is simpler**
- If you are installing and commissioning emergency lighting, **it is faster**
- If you are managing emergency lighting, **it is easier**

Zoneworks XT HIVE will continue to be supported by a team of Advantage Lifetime Support specialists that ensure each system is looked after for its lifetime at no additional cost. It’s just what we do.

Faster

Design, Install, Commissioning,
Testing & Maintenance

Lower Cost

Installation & Operation

Zoneworks XT HIVE is simple because you DON’T NEED to purchase & install:

- | | |
|-------------------------------|-------------------------------|
| ✗ Additional Routers | ✗ Additional Couplers |
| ✗ Additional Controller | ✗ Additional Data Points |
| ✗ Additional Repeaters | ✗ Data Cable Between Fittings |
| ✗ Additional Networking Cable | ✗ Additional Extenders |

Zoneworks XT HIVE features the absolute simplest RF backbone set up for any site.

- One single RF controller per 1,000 fittings
- Unlimited fittings per system
- Industry grade encryption and site security
- Highest data throughput and performance

Less backbone = Less cost

*1000 fittings per controller, unlimited fittings per system.
Location of the controller is flexible & can be moved should the need arise.

Unmatched
Simplicity

Unmatched
Performance

Dynamic Self-Managed
(DSM) Meshing

- Every fitting self-discovers other fittings around it to form “colonies” that dynamically build the network
- These colonies only communicate with each other and will not interfere with other wireless networks, even if they are on the same frequency
- Maximising the efficiency of the overall network
- Minimising commissioning and system management time

Zoneworks XT HIVE Backbone & Connectivity

Zoneworks XT HIVE is fast, simple and smart, allowing you to save time and costs across design, installation, commissioning and testing.

1. Automatically Mesh Devices

Once HIVE fittings are installed and powered up they automatically create a network by self-discovering others around them using dynamic self-managed meshing (DSM Meshing), saving valuable commissioning time.

2. Enable the Controller

Switch on the controller to provide access and control of the emergency lighting system.

3. Create your Log Book

The fitting register can now be easily uploaded and a smartphone or tablet can be used to perform local fitting diagnostics and identification.

The MAD (Mobile Access Device) is a portable access tool (as small as a smartphone) that enables service technicians a mobile field connection to the XT HIVE network using a smart phone or tablet app.

Security

The method used by the HIVE controllers to achieve this outcome is via a unique encryption key. Following the initial commissioning, the fittings are then issued an encryption key; either globally across the entire site or on a controller-by-controller basis.

In the same way that bees join a colony, once the encryption key is applied to the HIVE emergency fittings and the controller, a segregated community of Zoneworks XT HIVE emergency light fittings is established, and the members of this HIVE will only communicate with their fellow members, ignoring any others within range.

New members can only be added to this community by the issue of the site's unique encryption key. This key can be changed by the client if or as required.

The HIVE controller(s) and fittings also provide 3 levels of RF network security – Message Integrity, Message Confidentially (encryption) and Node Authenticity.

Message Integrity

Each message is appended with an OMAC1 Message Integrity Code.

Making sure the message content was not interfered with during transmission.

Message Confidentiality

Every message is encrypted with AES128 CTR mode using a message specific nonce.

Ensuring the message is encrypted in such a way that if it could be heard or intercepted the message could not be understood.

Node Authenticity

Network signalling messages are encrypted and appended with an OMAC1 Message Integrity Code (MIC). Nodes without the correct encryption & MIC key pair cannot join the network.

Making sure that received data can be trusted.

Security at the Controller and Server

Industry standard:

- SSH for file transfer
- HTTPS
- Secure Socket Layer for MQTT

Trusted across many industries

Government & Defence

Data Centres

Infrastructure & Transport

Operation & Reporting

Zoneworks XT HIVE has all the functionality users are familiar with, including a clean and simple web-based interface that can be integrated seamlessly with other networked building management services.

Fittings by groups

Flexible Site and User Management

Allows organisations with large sites or multiple locations to put one controller at each address to centrally manage all their emergency lighting systems from one place, including gathering compliance test results without needing to attend the sites in person.

A feature named “Site Group Access” enables facility managers to grant specific access to users across different parts of the network. For example, they might have an agreement with different local contractors to provide emergency lighting maintenance for different locations. The building manager can give them access to the system, but they’ll only see the parts that are relevant to their location.

This feature coupled with Active Directory Integration allows system administrators to manage users more effectively.

Hosting Options

While the Zoneworks XT platform can be housed locally, clients may instead choose to access Zoneworks XT Cloud Hosting, making it the practical choice for installations where there are no dedicated building management facilities. All that is required is an internet connection to the local XT HIVE RF controller and you are set to go.

Simpler Commissioning

Multiple installers can work efficiently together at different locations to create the master register, ready for managing compliance testing for the site. The Zoneworks App lets maintenance personnel manage multiple sites, including control of access to the system for additions or changes as required.

Sensitive Areas that Can’t Utilise Wireless Platforms

Zoneworks XT HIVE has the solution if an RF network isn’t suitable for selected rooms or areas that are shielded from all RF interference due a specialist function, or a requirement for specific luminaires. These may include high-security facilities, emergency services control rooms, hazardous area lighting, or hospital MRI rooms.

Adding a Hive2Wired bridge outside of the sensitive zone enables a Zoneworks connection using a (Non-RF) wired communication link into the shielded area and includes the fittings in the same system.

The reporting functionality provides everything you need at the push of a button from faulty fittings, maintenance log and full test results.

Fitting detail and history: Including monthly function tests and full duration tests.

Building Management Systems Integration

The Zoneworks XT management software includes the capability to integrate with 3rd party Integrated Building Management Systems platforms. This allows for the integration of the emergency lighting information into a single, consolidated building management system, alongside other building services including general lighting, ventilation, security, access, and more.

We offer integration with 3rd party Building Management Systems on several levels:

- a) Low Level via voltage free contacts that provide system alarm and fault indications.
- b) High Level via a Direct Structured Query Language (SQL) database access where all information associated with each emergency light fitting can be obtained (no additional cost).
- c) High Level via REST API or MQTT interfaces that work with multiple supervisory systems, including Integrated Building Management Systems (IBMS).

Clevertronics can provide a “System view” for the BMS integrator to access only the relevant information for each site.

Upgrading your site to XT HIVE from scratch

Previous emergency lighting system upgrades were costly and complex due to the required backbone and cabling requirements. With Zoneworks XT HIVE's simple backbone and RF meshing system, all sites, regardless of manufacturer, can now be easily upgraded cost-effectively.

Here are some signs you might need to consider an upgrade:

- Your facilities management team are struggling to stay on top of testing and maintenance requirements
- Your team isn't sure how your system works because training and support is minimal
- You're not sure if your building is compliant, and there's no log of the testing or maintenance
- Your costs to manage, maintain, and test your system are high - and going up over time
- Your lamps and batteries are an older style that needs replacing every year or so

XT HIVE progressive upgrades don't add any significant upfront cost to your emergency lighting maintenance budget as it only requires the small investment of a HIVE controller. As the existing fittings fail and need replacement, XT HIVE compatible fittings are installed as a progressive upgrade throughout the site. This process ensures you are only using the maintenance budget to achieve the upgrade. Depending on the health of the existing fittings, you will likely have a fully operational HIVE site within a few years.

Only one XT HIVE fitting and controller is required to start you on a better emergency lighting compliance journey.

Are you interested in understanding more about an upgrade at your site?

Contact **Clevertronics** for a site audit, demonstration and cost analysis report.

Technical Overview

Fittings per controller	Up to 1000.
Fittings per system	Unlimited.
High data throughput	Ultra fast data network enabling real-time analytics and response. Status and test result request times for a 1000 fitting network are an average of 1 second, or less per fitting.
Network Commissioning	The RF network builds itself automatically (unattended) resulting in a dramatic reduction in site commissioning time - Clevertronics can deliver a fully commissioned network faster.
Bluetooth Connectivity	Smart devices (IOS & Android) can connect locally via our mobile access device.
Compatibility	Supports Zoneworks Powerline and RF controllers.
Antenna Configuration	Internal (external antennas by exception only on a limited range of products).
Product Availability	L10 & CLP Exits, Emergency Luminaires & Linears.
Fittings Product Code	Add suffix '-HVG' to the part number of L10 & CLP Exits, Emergency Luminaires & Linears.
Security	XT HIVE fittings use high grade network security protocols to ensure that they only communicate within their site and will not interact with any device outside of the commissioned group.
No Interference	XT HIVE networks operates at 2.4Ghz, specifically designed to operate in environments alongside other RF systems, even those using the same frequency band including Wi-Fi, Mobile Phones, Bluetooth, and other wireless communication streams. It has proven performance in various environments including hospitals, retail, distribution centres, power stations, data centres, transport hubs and televised stadiums.

Warehouse & Distribution

Your Partner in Compliance

With the Zoneworks XT HIVE platform, Clevertronics also includes ongoing support through our complimentary Advantage Lifetime Support (ALS) program. This service is designed to help the building owner & maintenance contractor manage the on-going health for the life of the system.

Emergency lighting is regarded as a life-saving device, and therefore, it should always be in working order. Compliance with the standard can be costly, especially if the products and operating systems regularly fail.

Many emergency lighting companies finish their involvement on your project once the product has been supplied. However, at Clevertronics we know that on-going support is important to contractors and building owners.

Complimentary Lifetime Support

How can we help you?

System Health Check	Once you complete the testing, we assist with interpreting results
Optimisation	We can provide expert support to assist with optimising the system
Training	Periodic training is provided to ensure the user is confident with operating the system
Software	Complimentary software upgrades are installed to ensure your system is always up to date
Contact	You will always have a dedicated point of contact to answer your emergency lighting questions

Education

DALI Registered

Clevertronics manufactures a range DALI registered emergency and exit luminaires.

DALI, the open protocol supported by all the major lighting manufacturers, enables digital dimming, individual luminaire control, lamp and ECG status feedback and emergency test and monitoring – all over a robust and simple wiring solution.

What is DALI

Digital Addressable Lighting Interface or more widely known as DALI is an open data and communication protocol that is defined under the IEC 62386 international standard. Part 202 of the standard specifies a protocol and test procedures for the control by digital signals of electronic control gear for use on a.c. or d.c. supplies, associated with self-contained emergency lighting. Clevertronics DALI luminaires are all fully compliant with IEC 62386-202 and are registered on the DIIA product database.

DALI Integration

By integrating emergency luminaires with the DALI lighting control system the same wiring and networking infrastructure can be utilised to monitor and test the emergency and exit luminaires. The DALI standard enables dimmable ballasts, emergency fittings and controllers from various manufacturers to be used in a single control system providing a flexible digital lighting system for designers, installers, facility managers and end-users. The DALI lighting control system and the software module for the emergency lighting is supplied by the lighting control system provider. Commissioning and addressing of the luminaires including the emergency lighting is also carried out by the lighting control system provider or systems integrator.

STANDARDS AND COMPLIANCE

The Clevertronics range of DALI Registered emergency and exit luminaires have been designed in accordance to:
IEC 62386-202

Clevertronics and DALI

Each DALI emergency and exit luminaire incorporates a DALI plugin node module making the replacement of fittings simple without the need to re-address the new fitting. All Clevertronics DALI emergency and exit luminaires can be supplied with industry standard leads and connectors making installation to structured cabling quick and simple.

Clevertronics Support

Product and application support is always available for installers and integrators using Clevertronics DALI luminaires on a project. With dedicated project services and engineering teams based around Australia and New Zealand, we provide a high level of support for all projects and can provide technical advice, remote or on-site assistance at Clevertronics discretion.

DALI Product Range

Our extensive CLP Premium and L10 Nanophosphate ranges are available with DALI.

Case Study – CTP System

Coles Group Melbourne VIC

Coles Group has broken new ground in emergency and exit lighting by achieving best in class compliance thanks to a hugely successful partnership between its facilities management company CityFM and emergency and exit lighting specialists Clevertronics. Clevertest Plus self-testing fittings, combined with the innovative CleverSparky app, means Coles customers and staff are 100% safe and CityFM can generate a compliance report at the push of a button.

As one of the world's largest privately-owned facilities management companies, employing over 13,000 people with divisions across five continents, CityFM has an outstanding reputation for providing facilities management solutions to some of the world's biggest companies. In Australia, CityFM's expertise is proven by their longstanding contract with the Coles Group, Australia's second largest retailer, who have placed all 800 of their supermarkets in the company's care.

Challenges

One of the most important aspects of CityFM's service offering is maintaining compliant emergency and exit lighting systems in accordance with emergency lighting standards. As defective emergency lighting is a serious public safety issue, when it came to deciding who to trust to help them uphold their legal obligations, it is not surprising that CityFM turned to Clevertronics. National Regional Technical Manager for CityFM, Hector Bright, explains why:

"Right at the core of the success and longevity of the CityFM and Coles Group relationship is

CityFM's ability to innovate consistently across the full-service offering. Within this, emergency and exit lighting is pivotal and it is my job to make sure the best and most reliable products are installed," he says. "We chose

Clevertronics as our emergency and exit lighting partner because they were, and are, the most innovative company working in that space."

Clevertronics holds an estimated 50% market share in Australia and New Zealand across small, medium and large installations. Although all new Coles stores are automatically specified with Clevertronics Zoneworks (the gold standard emergency and exit lighting system), for existing stores a full retrofit is not always economically feasible.

"Doing a full retrofit with Zoneworks in our older stores was not possible, but we knew we had to do something to improve the emergency and exit lighting and maintenance approach. The manual method was no longer serving us. In fact, we increasingly recognised compliance risks associated with it," continues Bright. The manual system that Bright is referring to is a single point test and maintenance regime that has been in place for many years. It involves a technician walking around the store physically checking the fittings, making sure they stay illuminated for the required duration and recording the data in a paper logbook.

"We chose Clevertronics as our emergency and exit lighting partner because they were, and are, the most innovative company working in that space."

"It has been a great learning curve for us, has improved safety and removed the compliance risks. In fact, it has set a new benchmark by going above and beyond the standard."

Solution

Product Support Manager for Clevertronics, Jason Meiklejohn, explains why this is far from the best approach. "We found huge variability in the way data was being recorded and managed. The whole regime made proving compliance quite difficult. In addition, the large population of legacy NiCad and fluorescent fittings installed in stores are reaching their end of life leading to high failure rates as well as high maintenance and energy costs."

Bright agrees. "There is no doubt that the single point test and maintenance regime is a pretty clunky way of doing things. It's not only time-consuming, and therefore costly, but must be done out of hours and, most seriously, is open to error and omissions. If it's not 100% correct, this creates a huge compliance risk for the business if a fault should occur and data is found to be missing or wrong."

With huge fines at stake, should an audit identify a problem, not to mention the safety risk to customers and staff, Bright engaged the team at Clevertronics to figure out a more time and cost-effective solution.

Results

The result is Clevertest Plus (CTP) System which has recently become operational in a concept Coles store called Middle Park in Queensland. Clevertronics National Accounts Manager, Graeme Smith, says it is incredibly gratifying to see the culmination of the four-year CTP product innovation journey finally come to life.

"Although we are scheduled to roll CTP out to all 600 of the older stores, Hector Bright was keen to get one store fully operational so we could easily demonstrate the benefits. We identified Middle Park Coles as the perfect place to showcase the system because 80% of the emergency and exit lighting fittings had already been replaced with Clevertronics CLP, which all have self-testing as a standard feature," explains Smith.

Bright says he is thrilled with the results. "We have programmed the system to self test every six months, as per our compliance obligations and, at that point, all the technician has to do is check each fitting to see if the LED is displaying a pass or fail indication. They capture the data electronically as they go using CleverSparky, then upload the data to the cloud for internal or, fully compliant, external auditing. It's brilliant."

There is no doubt the new CTP system will reduce labour costs, eliminate errors and give uniformity to the data collection process. In addition, Bright says it helps with forward maintenance. "If the fitting does display a failed test result, meaning there is an error, you can scan the fitting with your phone to automatically identify the issue, or just view the way the LED flashes to see what is required to fix it. We then electronically log the maintenance request,"

Smith is also happy with how the project has evolved. "It's win-win-win. For CityFM, for Coles and for Clevertronics. It has been a great learning curve for us, has improved safety and removed the compliance risks. In fact, it has set a new benchmark by going above and beyond the standard," he notes.

Having successfully demonstrated the concept store, the project is swiftly progressing towards the end goal, which is to have all single point Coles stores fully installed with CTP fittings and all data migrated onto CleverSparky.

"This will really drive efficiency gains giving us what I call 'more for less,'" continues Bright. "It has been great to work with Clevertronics on the project. Our aim has always been to get the best product for the right price with the right support, and all of that combined equals Clevertronics."

Case Study – Zoneworks XT HIVE

Australia House London UK

Australian Embassy issues emergency lighting overhaul at Australia House in London. Australia House is a listed century old heritage building in the heart of the City of Westminster, London. Over its long life, Australia House has had numerous refurbishments and 'fit outs' creating multiple layers of complex emergency lighting solutions.

Due to the challenging nature of the project, international consultancy WSP engaged Clevertronics and together created a solution that consisted of two main elements:

1. Assess and ensure the life safety lighting met the current standards for safe egress during an emergency
2. Simplify and modernise the way the emergency lighting system was tested, maintained and operated Being such a fundamental part of the building's operation, the project was separated into phases based on priority areas within the building.

The first phase consisted of replacing and upgrading the main egress and staircase emergency and exit lighting, as well as other high traffic areas. The second phase included additional egress areas and the rest of the building.

Challenges

Due to the building's age and complexity the major challenges of the project were the 'unknown elements' that could not be assessed effectively until the contractors were on site. A good example of this was understanding the existing routes taken by cable submains and final circuits to luminaires, many of which could not be ascertained without intrusive surveys.

"Australia House has had numerous refurbishments and 'fit outs' creating multiple layers of complex emergency lighting solutions."

Solution & Result

The Clevertronics system, was carefully chosen and linked to meet the clients' challenges. First and foremost, a top priority was given to provide sufficient lighting to cover all egress areas causing minimal disruption to the building when replacing the existing emergency lighting system.

To 'link' the system together, Zoneworks XT HIVE wireless mesh was chosen due to its continual monitoring and automatic testing of the emergency luminaires ensuring continued ongoing compliance. An additional benefit of using the wireless Zoneworks HIVE meant less hardware, cabling and commissioning. This was enthusiastically welcomed as additional high risk and intrusive works can equal high cost and delays.

Australia House is eligible for the Clevertronics Advantage Lifetime Support (ALS) program, as are all installed Clevertronics Zoneworks HIVE systems, therefore Australia House will receive free support for their HIVE system for the lifetime of the installation. ALS is made possible, in part, due to our

L10 Lithium Nanophosphate products, which has unrivalled warranty and have been engineered with a 12+ service life in mind. (See website for details of our ALS Program). This project is a crowning achievement by all parties involved. 400 plus emergency luminaires have been installed, commissioned, and tested. Full training has been deployed to the client and facility manager to ensure that they are able to confidently use their new HIVE testing system. As Jason Li of WSP says, "We've had great responses and feedback from the team with regards to the ease and simplicity of the Zoneworks XT HIVE interface. With a few clicks, the team can now automate scheduled tests of the luminaires on a consistent monthly basis and plan for a yearly 3hr test. Better still, they can visually assess the performance of the system as the installation completely simplifies the overall management of each luminaire."

Continuing, Jason describes "In the past this would have taken days to inspect each month at great difficulty and expense due to the nature of the building. Now being automated, it directly reduces labour time and costs and any likelihood of human error. This single, easily manageable, emergency lighting system is the future and is certainly something we will be using more of."

"This single, easily manageable, emergency lighting system is the future and is certainly something we will be using more of"

Case Study – L10 Nanophosphate®

Marvel Stadium Melbourne VIC

Marvel Stadium is a 52,000 seat multi-purpose facility designed to cater for major sporting and entertainment events, as well as social, business and private functions. The venue hosts as many as 80 arena sports and entertainment events and 600 non-event day functions annually in its 15 different function spaces.

In 2012, Honeywell was tasked with reviewing the Emergency and Exit Lighting within the stadium. With the existing system reaching the end of its serviceable life the maintenance costs which were already high had reached a level which was not sustainable at \$1,083,000 in costs over a 7 year period.

Challenges

With the stadium receiving such a high level of foot traffic, Emergency & Exit escape lighting is of utmost importance and the quality and performance of the emergency lighting is critical to ensure compliance is always achieved. Emergency and exit lighting also represented a major ongoing maintenance and energy cost for the stadium, and as time passed these costs grew exponentially as products had failed.

The biggest challenge was to firstly achieve 100% compliance and ensure safety for the customers and staff at the stadium and ensure the reliability could be improved and therefore reduce the overall maintenance costs over a 7 year period.

Solution

Following the consideration of various options, Honeywell was introduced to the Clevertronics L10 Nanophosphate® Lithium powered lighting range which had just been launched after 12 months of extensive testing. The Honeywell Victoria TAM Operations Manager who was managing the project said “The L10 Lithium

range is the way of the future. I believe the move away from NiCd batteries will be quite swift as building owners and facility managers become aware of the numerous advantages that L10 product offers. The added advantage of low environmental impact and also less waste through longer replacement intervals also makes it a far more sustainable technology compared to existing practice.” In September 2012, the installation of 2,756 Clevertronics L10 Nanophosphate® exit and emergency lighting fittings and a Zoneworks computer monitoring system began and was commissioned in early 2013. Honeywell estimated that switching from traditional Ni-Cd fittings to the Clevertronics L10 Nanophosphate® fittings would see its total energy and maintenance costs for emergency lighting reduced from \$1,083,830 to \$178,867 over a seven-year period, representing a saving of 83.5% which was beyond expectations before the project began.

Results

Results in August 2020 has shown that the average capacity of the L10 Nanophosphate fittings are at 93.51%, with an average run time of 178 minutes (90 minutes is the required time) after 8 years in service.

This indicates that the L10 batteries are on track to exceed the expected design life of the L10 product by a significant margin.

The site has now delivered the maintenance and energy savings estimated at the time of installation and continues to provide the site with the lowest cost emergency lighting solution on the market.

“The L10 Lithium range is the way of the future. I believe the move away from NiCd batteries will be quite swift as building owners and facility managers become aware of the numerous advantages that L10 product offers.”

Marvel Stadium after 8 years

CLEVERFIT EXIT LIGHT

LED Exit Suitable for All Applications

The Cleverfit Exit Light is a proven market leader that is known for its reliable, robust design, energy efficiency and quality lithium battery technology.

The Cleverfit Exit Light can be either wall or ceiling mounted with directional decals for single and double-sided applications provided in each box.

Applications

-  Office Buildings
-  Schools
-  Factories
-  Retail Outlets
-  Car Parks
-  Theatres

Features and Benefits

- Tested to BS EN 60598-2-22
- Compliant to EN1838 and ISO7010
- Low standby power consumption
- Wall and ceiling mount with easy slide connect
- Can be rod or chain suspended
- All directional decals in one box
- Lithium Iron Phosphate or Nanophosphate® battery
- DALI® and Zoneworks® test options available
- Clevertest Plus System compatible
- Theatre version available

FORM EXIT LIGHT

Architectural Exit
for all Applications

The Form 20m Exit strikes a balance between Form & Function. Featuring an elegant and size optimised anodised aluminium frame, the Form is a versatile architectural solution available in multiple configurations including wall, ceiling, recessed, or suspended rod or cable mounting. Designed for simplified installation and maintenance, it also features our industry leading ‘One-Box’ solution that allows easy changing of directional decals as required.

Applications

-  Office Buildings
-  Retail outlets

ULTRABLADE PRO ROD SUSPENDED EXIT LIGHT

ULTRABLADE PRO ROD SUSPENDED EXIT LIGHT

Rod Suspended Architectural Blade Exit

The Ultrablade Pro Rod Suspended Exit Light is ideal for high ceiling applications where a sophisticated premium outcome is required.

Each directional decal is scratch and fingerprint resistant to ensure a clean and consistent outcome.

The 1.5m rods can be customised to suit lower ceiling heights where required.

Features and Benefits

- Tested to BS EN 60598-2-22
- Compliant to EN1838 and ISO7010
- Low standby power consumption
- Steel rods supplied with fitting
- All directional decals in one box
- Lithium Nanophosphate® battery
- Clevertest Plus System compatible
- Theatre version available

Applications

- Office Buildings
- Galleries
- Theatres
- Shopping Centres
- Retail Outlets
- Apartments

JUMBO LED EXIT LIGHT

Jumbo Exit for Larger Viewing Distances

The Jumbo Led Exit Light caters for 50m viewing distance applications by using a 250mm high pictograph.

Featuring a robust steel housing with slide-in diffusers and backplates for single and double-sided configurations, the Jumbo Led Exit Light is easy to install as a wall or ceiling mounted exit.

Applications

- Warehouses
- Stadiums
- Factories
- Halls
- Car Parks
- Train Stations

LOW TEMPERATURE EXIT LIGHT

Suitable for Cool Room and Freezer Applications

The Low Temperature Exit Light range is designed for cool room and freezer applications where the temperature can drop to -40°C. The range consists of IP66/67 exits that include lithium battery technology which ensures significant maintenance savings compared to other alternatives.

Integral battery luminaires perform in temperatures between -25°C to +40°C. Remote gear luminaires perform in temperatures between -40°C to +40°C.

Applications

-  Cool Rooms
-  Food Processing
-  Freezers
-  Alpine Regions

Features and Benefits

VANDAL RESISTANT EXIT LIGHT

A Strong, Robust and Reliable Exit Light

The Clevertronics Vandal Resistant Exit Light is a high impact exit that utilises the Cleverfit Pro Exit Light within a powder coated steel IK12 enclosure that is electrically isolated for ease of maintenance.

It provides an effective solution for prisons, correction facilities, train stations and other applications where impact resistance may be required.

Applications

- Public Amenities
- Schools
- Stadiums
- Train Stations
- Car Parks
- Correctional Facilities

Features and Benefits

- Tested to BS EN 60598-2-22
- Compliant to EN1838 and ISO7010
- Wall, ceiling and flag mount options
- All directional decals in one box
- Lithium Nanophosphate® battery
- DALI® and Zoneworks® test options available

CleverEVAC DYNAMIC GREEN EXIT LIGHT

CleverEVAC

Dynamic GREEN LEDs
for Highest Visibility

Research by the Fire Safety Engineering Group (FSEG) found that people often didn't notice static exit signage, whereas significantly more people noticed dynamic exit signage. This led to the development of the CleverEVAC Dynamic Green Exit Light.

The Dynamic Green mode is activated upon a loss of mains power. It can also be triggered either by a 24VDC or a voltage free open/close signal from the fire detection or other building safety system.

The SoundEscape™ option which combines the audible locatable sound technology including voice announcements is available with the Dynamic Green Exit Light.

Suitable for Most Applications

- Office Buildings
- Shopping Centres
- Stadiums
- Theatres
- Car Parks
- Airports
- Schools
- Transit Centres

Features and Benefits

- Tested to BS EN 60598-2-22
- Compliant to EN1838 and ISO7010 in non-dynamic mode
- Low standby power consumption
- Wall and ceiling mount with easy slide connect
- Lithium Iron Phosphate or Nanophosphate® battery

CleverEVAC DYNAMIC RED X EXIT LIGHT

Dynamic RED X & GREEN LEDs for Highest Visibility

CleverEVAC Dynamic Red X Exit Light can display a red cross with flashing corners, alerting those evacuating to seek an alternative exit. Using advanced lighting and printing technology, the red cross with flashing corners has been proven through the Fire Safety Engineering Group (FSEG) research to be intuitive and effective in demonstrating negative enforcement.

The Dynamic Red X mode is triggered either by a 24VDC or voltage free open/close signal from the fire detection or other building safety system. The Dynamic Red X Exit Light also has the Dynamic Green mode built in, to accommodate different fire and evacuation scenarios. The use of the Red X must be designed and documented by a fire safety engineer.

CleverEVAC DYNAMIC GREEN BLADE EXIT LIGHT

Dynamic GREEN LEDs for Highest Visibility in a Blade

Research by the Fire Safety Engineering Group (FSEG) found that people often didn't notice static exit signage, whereas significantly more people noticed dynamic exit signage. This led to the development of the CleverEVAC Dynamic Green Blade Exit Light.

The Dynamic Green mode is activated upon a loss of mains power. It can also be triggered either by a 24VDC or a voltage free open/close signal from the fire detection or other building safety system.

The sophisticated look and design of the Dynamic Green Blade Exit Light will satisfy all architectural requirements for a premium recessed or surface mount exit.

CleverEVAC DYNAMIC RED X BLADE EXIT LIGHT

Dynamic Red & Green LEDs for Highest Visibility in a Blade

The CleverEVAC Dynamic Red X Blade Exit Light can display a red cross with flashing corners, alerting those evacuating to seek an alternative exit. Using advanced lighting and printing technology, the red cross with flashing corners has been proven through the Fire Safety Engineering Group (FSEG) research to be intuitive and effective in demonstrating negative enforcement. The sophisticated look and design of the blade will satisfy all architectural requirements and is available as a recessed or surface mount.

The Red X mode is triggered either by a 24VDC or voltage free open/close signal from the fire detection or other building safety system. The Green mode is also built in, to accommodate different fire and evacuation scenarios. The use of the Red X must be designed and documented by a fire safety engineer.

Suitable for Most Applications

- Office Buildings
- Theatres
- Stadiums
- Schools
- Shopping Centres
- Airports & Transit

LIFELIGHT IP44 SPLASHPROOF RECESSED EMERGENCY LUMINAIRE

LED Recessed Lifelight with Splashproof Head

The Splashproof Lifelight is a recessed emergency luminaire that is designed for use in applications where an IP44 rating is required, including escape and open area applications.

Complete with Lithium Iron Phosphate batteries to ensure low maintenance requirements.

Each product is supplied with a 145mm adaptor plate to enable an easy retrofit installation.

Applications

- Bathrooms
- Aquatic Centres
- Schools
- Public Amenities
- Gyms

Features and Benefits

- Tested to BS EN 60598-2-22
- LED lamp
- IP44 splashproof head
- Lithium Iron Phosphate or Nanophosphate® battery
- DALI® and Zoneworks® test options available
- Clevertest Plus System compatible
- Supplied with additional corridor lens

LOW TEMPERATURE EMERGENCY

Emergency Lighting for Low Temperature Applications

The Low Temperature Emergency lighting range is designed for cool room and freezer applications where the temperature can drop to -40°C.

The range comprises of an integrated option that is rated for -25°C and a remote control gear option that will handle -40°C.

Both options are constructed with polycarbonate enclosures and are rated IP66/67.

Applications

-  Cool Rooms
-  Freezers
-  Food Processing
-  Alpine Regions

Square LED
Emergency Luminaire

The Argonaut Square Emergency Luminaire is an IP65 and IK10 rated luminaire that is ideal for applications such as car parks, corridors, stairwells and walkways.

Market leading lithium battery technology provides lower maintenance costs and LED lamps combined with high/low sensors provides an opportunity to reduce energy costs significantly.

Constructed with a die cast aluminium body and polycarbonate diffuser the Argonaut Square provides a robust and decorative emergency lighting solution.

Applications

- Apartments
- Car Parks
- Factories
- Public Amenities
- Schools
- Sports Facilities

Features and Benefits

BULKLITE EMERGENCY LUMINAIRE

BULKLITE EMERGENCY LUMINAIRE

Durable Bulkhead Luminaire

The Bulklite Emergency Luminaire is a durable and weatherproof IK08 impact rated LED emergency luminaire that can be easily configured to an exit sign using optional directional legends.

Made from UV stabilised polycarbonate and featuring efficient long life LED's and lithium battery power, the Bulklite is designed for robust wall or ceiling applications.

Applications

- Apartments
- Car Parks
- Factories
- Public Amenities
- Schools
- Sports Facilities

Features and Benefits

- Tested to BS EN 60598-2-22
- Wall and ceiling mount
- IP65

BUNKALITE EMERGENCY LUMINAIRE

BUNKALITE EMERGENCY LUMINAIRE

Robust and Weatherproof LED Circular

The Bunkalite is an IP65 and IK10 luminaire that is ideal for outdoor covered applications such as corridors, stairwells and walkways in schools and apartment blocks. Constructed with a powder-coated steel body and white opal polycarbonate diffuser the Bunkalite Emergency Luminaire provides a decorative solution for both industrial and commercial use.

Market leading lithium battery technology provides lower maintenance costs and LED lamps provide a low standby power rating that will reduce energy costs significantly.

Available in white, black, grey and silver options to suit various environments.

Applications

- Apartments
- Car Parks
- Factories
- Public Amenities
- Schools
- Sports Facilities

Features and Benefits

- Tested to BS EN 60598-2-22

DISC CIRCULAR LED LUMINAIRE

Disc Circular LED
Emergency Luminaire

The DISC Circular LED is an IP20, surface mounted round luminaire ideal for stairwells and corridors.

This round luminaire is assembled on a strong white spun metal base with a UV stabilised opal diffuser for smooth illumination, and includes lithium battery technology which ensures significant maintenance savings compared to other alternatives.

Applications

-  Office Buildings
-  Car Parks
-  Public Amenities
-  Railway Stations
-  Schools
-  Sports Facilities

Features and Benefits

- Tested to BS EN 60598-2-22
- Lithium Nanophosphate® battery
- Large terminal block
- DALI® and Zoneworks® test options available
- Clevertest Plus System compatible

Ultimate Spec & Efficiency,
Configurable Quad Output*

The Argonaut Pro Weatherproof Linear range is designed to maximise LED efficiency with the highest product performance and LED lifetime. Featuring configurable quad output, they maximise efficiency by delivering up to 152lm/W.

Backed by Clevertronics support, service and warranty, the Linear range is available as a Standard or Emergency CLP or L10 Nanophosphate with monitoring capabilities including Zoneworks XT Hive, DALI and CTP.

Applications

-  Car Parks
-  Stairwells
-  Fire Stairs
-  Corridors
-  Back of House

Emergency Range

*1200mm Standard Linear, varies by model.

Features and Benefits

- Tested to BS EN 60598-2-22
- Configurable quad output (varies by model)
- IP65
- Long life, energy efficient LED strip module
- Large terminal block for easy installation
- Lithium Iron Phosphate or Nanophosphate battery
- Emergency POD for maximum in-service life and lowest maintenance cost
- Emergency integral battery option also available
- Efficacy options of 137lm/W → 152lm/W

Please confirm the applicable Specifications at the time of placing your order.

ARGONAUT VANDAL RESISTANT LINEAR

High Level Impact Protection

The Argonaut Vandal Resistant Linear range provides a wide selection of emergency Linears for vandal resistant applications where higher level of impact protection is required.

Available in L10 Nanophosphate® with all emergency test options including Zoneworks® XT Hive, DALI and CTP System.

Features and Benefits

- Tested to BS EN 60598-2-22
- LED lamps
- Lithium Nanophosphate® battery
- IK10
- IP66
- Die cast low copper aluminium body
- Zoneworks® XT Hive or DALI test options
- Clevertest Plus System compatible

Applications

- Public Amenities Schools
- Stadiums Railway Stations
- Car Parks Correction Facilities

ARGONAUT VANDAL RESISTANT LINEAR 600MM

ORDERING INFORMATION		L10	MAINS
TEST OPTIONS / PART #	Nominal Size	600mm	600mm
	Standard	LVP2LED-M-P	FVP2LED-P
	DALI Driver	LVP2LED-M-P-DD	FVP2LED-P-DD
	CTP System Compatible	Yes	-
	Motion Sensors	Yes (High/Low) + ON / OFF	
	DALI	LVP2LED-M-P-DALI	-
	Zoneworks® XT Hive	LVP2LED-M-P-HVG	-
Carton Quantity		4	
Weight - Single (Carton)		3.2kg	2.4kg
Dimensions (L x W x H)		790mm x 140mm x 120mm	700mm x 140mm x 120mm

■ For Motion sensor version add -MS -HL to the product code as per the following example. LVP2LED-M-P-MS-HL

TECHNICAL SPECIFICATIONS		L10	MAINS
Construction - Base		Pressure Die-Cast, Low Copper Aluminium Alloy Body with Powder Coat Paint Finish	
Construction - Diffuser		Opal Impact Resistant Polycarbonate with Secure Access Screws (LSZH)	
Voltage (V) (Frequency (Hz))		220-240V (50Hz)	
Power Consumption ♦ (Standby / Max)		1.3W / 27W	22W
Nominal Total Light Output ♦		2529lm	
Lamp		LED Strip Module	
Lamp CCT & Life ♦		4000K, 100,000 hrs (L80,B20, Ra>80, Ta40c)	
Operating Temperature		0°C to 40°C	
Ingress Protection Rating (IP)		IP66	
IK Rating		IK10	

♦ Please refer to the specific product data sheet for actual power, light output, lamp lifetime and driver values.

Emergency Lighting Modes of Operation

The following table outlines the different modes that exit and emergency lighting fittings can operate in. Contact us if you would like some assistance in selecting the right mode for your application.

Emergency Operating Modes

Maintained

An emergency luminaire in which the lamp is energised at all times. The lamp is ON when there is power present and is ON during a power failure.

EXAMPLES: Exit signs. Single lamp fluoro battens used in plant rooms to function as both general lighting and the emergency lighting.

Non-Maintained

An emergency luminaire in which the lamp(s) are only in operation during a power fail.

EXAMPLE: Single lamp: Lifelight emergency luminaires.

EXAMPLE: Twin lamp: Supalite floods, often used in factory units and only operate in the event of a power fail.

Sustained

An emergency luminaire typically containing two lamps, one of which is in operation while there is power present, and the other “non-maintained” lamp only energised during a power fail. Also known as Combined Non-Maintained.

EXAMPLE 1: LED TUBE or LED strip batten with separate dedicated LED emergency pod.

EXAMPLE 2: LED Strip batten with dedicated separate internal LED's with emergency battery back up.
